## PROGRAMMER

Result-oriented Fullstack Software Engineer with 4+ years of professional experience in building, scaling, and modernizing enterprise web applications. Specialized in backend development using Java (Spring Boot, Quarkus) and robust frontend interfaces using Angular / AngularJS. Proven track record in microservices architecture, secure API integrations, and optimizing relational databases (Oracle, PostgreSQL). Adept at working within Agile/Scrum environments to deliver high-performance and scalable business solutions.

---

## KEY COMPETENCIES

|                                               |                       |                          |
|-----------------------------------------------|-----------------------|--------------------------|
| Java Springboot Framework                     | Java Spring Framework | Intellij, Netbeans , VSC |
| Java Quarkus Framework                        | MVC                   | Store Prosedure          |
| Database (oracle, postgresQL, mongo, mariaDB) | Microservices - API   |                          |
|                                               | AngularJs Framework   |                          |

---

## PROFESSIONAL EXPERIENCE

### PT.Tiga Daya Digital Indonesia

Jun 2022 - Jun 2024

- Successfully migrated enterprise legacy applications from Spring Boot to Quarkus, significantly reducing application startup times and optimizing runtime resource allocation
- Architected and maintained highly scalable backend microservices leveraging Java (Spring/Quarkus) alongside PostgreSQL and Oracle database instances..
- Contributed actively across all phases of the SDLC, from initial requirement mapping and system design through to automated testing, deployment, and high-tier production support.
- Collaborated productively in an Agile/Scrum structure, participating in daily stand-ups, sprint planning, and productive code peer-reviews.

Project List :

#### 1.FM Unit Identification | Java Spring Boot, Angular

- Developed a comprehensive vehicle tracking and asset management system powered by RESTful backend services.
- Built a highly responsive Angular web frontend integrated with an optimized Oracle database layer to provide live operational insights.
- Built java integration APIs for mobile-to-web data processing, ensuring bulletproof reporting accuracy.

#### 2.IMOVE ADIRA | Angular, Spring Boot

- Developed attendance monitoring and task management system for field debt collectors.
- Built REST APIs for mobile and web integration.
- Ensured stable data processing and reporting functionality.

#### 3.Super App (Debt Collector App) | Spring Boot, Eureka, MongoDB, PostgreSQL

- Designed and engineered a scalable microservices architecture optimized for distributed, high-volume financial operations.
- Implemented efficient hybrid data storage architectures utilizing MongoDB for document-based logs and PostgreSQL for transactional data.
- Established robust service discovery utilizing Netflix Eureka to ensure seamless distributed system scalability and fault tolerance.

#### 5.IDI Tangerang Web App | PHP Laravel, PostgreSQL

- Engineered a structured membership registration and management web application for Ikatan Dokter Indonesia (IDI) Tangerang.
- Implemented secure RBAC (Role-Based Access Control) user authentication and reliable data management.

**Backend Developer - Collateral And Admin Web Page Development**

- Designed and built scalable, secure REST APIs using Java (Quarkus) integrated with PostgreSQL to support core financial management modules.
- Implemented Apache Kafka for high-throughput asynchronous messaging and Redis for efficient data caching, substantially lowering response latency and system overhead.
- Containerized microservices via Docker to optimize deployment agility and guarantee architectural consistency across development, UAT, and production environments.
- Partnered with cross-functional frontend and business teams to rapidly deliver backend workflows for collateral tracking and financial administrative portals.

**PT. PFI MEGA LIFE****Oct 2024 - Present****IT Application Officer**

- Develop and maintain critical internal web and cross-platform mobile applications (iOS) using Spring Boot, Angular, AngularJS, Ionic, and PHP, ensuring seamless full-stack integration.
- Manage and optimize enterprise PostgreSQL and Oracle databases, including designing complex Stored Procedures and PL/SQL logic to accelerate query performance and system reliability.
- Collaborate closely with business units to translate operational requirements into scalable technical solutions, successfully automating workflows and reducing manual processes.
- Design and implement secure RESTful API integrations with internal legacy systems, significantly enhancing data synchronization and user experience across platforms.
- Conduct continuous application maintenance, rigorous debugging, and streamlined deployment using Git and CI/CD pipelines.

Project List :

**1. Claim Management System | Java Spring Boot | Oracle Database | PL/SQL (Stored Procedure)**

- Developed and maintained an enterprise-grade claim processing system for insurance operations.
- Designed and integrated complex Oracle Stored Procedures to handle claim validation, approval workflow, and financial calculations.
- Implemented RESTful APIs using Spring Boot to ensure seamless integration with internal systems.
- Optimized database performance through query tuning and structured PL/SQL logic.
- Ensured data integrity and transactional consistency for high-volume claim records.

**2. Satria POS System (Sharia Product) | Angular | Java Spring Boot | Oracle Database**

- Built a Point of Sales (POS) system tailored for Sharia-compliant products.
- Developed responsive frontend interfaces using Angular for transaction management and reporting.
- Designed backend services using Spring Boot with secure REST APIs.
- Integrated Oracle Database for transactional data, inventory management, and financial reporting.
- Implemented validation logic aligned with Sharia business rules and compliance requirements.

**3. Imago POS System (Conventional Product) | Angular | Ionic | Java Spring Boot | Oracle Database**

- Developed and maintained a cross-platform POS application using Angular and Ionic framework for mobile deployment (iOS).
- Built scalable RESTful backend services using Spring Boot.
- Designed Oracle-based database schema for transaction processing, product catalog, and user management.
- Ensured high system availability and performance for daily retail transaction operations.
- Collaborated in full-stack development, including frontend UI optimization and backend API integration.

#### 4. Core System Life Insurance | Angular | Java Spring Boot | Oracle Database | Docker | CI/CD

- Led redevelopment (remake) of legacy Life Insurance Core System into a modern web-based architecture.
  - Designed modular backend services in Spring Boot with clean architecture principles.
  - Implemented Oracle Database for policy management, underwriting, premium calculation, and billing modules.
  - Containerized applications using Docker for consistent development and deployment environments.
  - Integrated CI/CD pipeline to streamline build, testing, and deployment processes.
  - Improved system scalability, maintainability, and performance compared to legacy platform.
- 

## EDUCATION & CERTIFICATIONS

### Bachelor of Science (3,39 GPA)

Majors: Physics

Padjadjaran University

### Bootcamp Java Developer

PT. Tiga Daya Digital Indonesia
